

To all prospective PhD students out there!

I am Maria, and I am looking for motivated PhD students to join my lab next year at the best medical research institute in Australia, the Walter and Eliza Hall Institute (WEHI). It is located in the heart of Melbourne, one of the most liveable cities worldwide. You would be enrolled at the University of Melbourne (#33 in QS World University Rankings).

During my PhD, I studied cell death in the context of inflammation. During my Postdoc, I applied cutting-edge mass spectrometry in the lab of Prof. Mann at the Max-Planck Institute of Biochemistry. For my lab, I envisage combining both. We will use the most recent developments in proteomics to study protein translocation, post-translational modifications, and protein regulation of processes driving inflammatory- and auto-immune disease (Arthritis, Systemic Lupus Erythematosus).

If you are interested in becoming an expert in inflammation, cell death signalling and proteomics and learning surfing in your free time, please shoot me an email (mariac.tanzer@gmail.com)

Best,

Maria
